Foreword	i
1. Introduction	1
2. Scope	3
2.1 Objectives of the bulletin	3
2.2 Performance-based fire design approach	4
2.3 Types of concrete materials and concrete structures	5
References	7
3. Description of the thermal / structural response of concrete in fire	8
3.1 Fire action	8
3.2 Consequences of a fire on a concrete structure	9
3.3 Concrete material behavior	11
3.3.2 Mechanical Properties	12
3.3.1 Thermal Properties	12
3.3.3 Stress-strain Behavior	15
3.3.4 Properties during cooling phase	15
3.3.5 Spalling	16
3.4 Steel reinforcement material behavior	16
3.5 Structural behavior and failure modes	18
3.6 Knowledge gaps	21
References	23
4 Design strategy for fire safety of concrete structures	27
4.1 General design process for fire safety of concrete structures	27
4.2 Guidance of practical design process for fire safety of concrete structures	28
4.2.1 Scope of the project	28
4.2.2 Identifying objectives, functional requirements, risk analysis approach, and performance criteria	28
4.2.3 Trial design plan for fire safety of concrete structures	28
4.2.4 Design fire scenarios and design fires	28
4.2.5 Thermal response of the structure	29
4.2.6 Mechanical response of the structure	30
4.2.7 Assessment against the fire safety objectives	30
4.2.8 Documentation of the design for fire safety of concrete structures	30
References	31

5	Quantification of the performance of concrete structures in fire	32
5.1	Scope of the project	32
5.1.1	Built environment characteristics	33
5.1.2	Fuel loads	33
5.1.3	Mechanical actions	34
5.2	Identifying objectives, functional requirements, risk analysis approach, and performance criteria	36
5.2.1	Objectives	36
5.2.2	Functional requirements	36
5.2.3	Risk Analysis approach	37
5.2.4	Performance criteria	37
5.3	Trial design plan for fire safety of concrete structures	38
5.4	Design fire scenario and design fires	38
5.4.1	General	38
5.4.2	Design fire scenarios	39
5.4.3	Design fire models	40
5.5	Thermal response of the structures	43
5.5.1	Evaluation of temperature distributions in concrete structural members	43
5.5.2	Various simplifications and levels of sophistication in the thermal models	46
5.5.3	Special cases	46
5.6	Mechanical response of the structure	47
5.6.1	Sectional analysis	47
5.6.2	Advanced analysis	50
5.6.3	Assessment throughout the stages of the fire (including burnout resistance)	57
5.6.4	Special considerations	64
5.7	Assessment against the fire safety objectives	68
5.8	Documentation of the design for fire safety of concrete structures	71
5.8.1	Introduction	71
5.8.2	Purpose	71
5.8.3	Involved parties or recipients	71
5.8.4	Recommended principles	72
5.8.5	Recommendations for the range of the documentation	72
	References	73

Appendix: Guidance on use of engineering methods	80
A.1 Guidance for use of advanced calculation methods	80
A.1.1 Introduction	80
A.1.2 The human factor	80
A.1.3 The software	81
A.1.4 Thermal calculations	82
A.1.5 Mechanical calculations	91
A.1.6 Evaluation of the results	98
A.2 Guidance for use of probabilistic methods	99
A.2.1 Probabilistic methods in structural fire engineering	99
A.2.2 Design fire uncertainty	100
A.2.3 Thermal response uncertainty	101
A.2.4 Mechanical response uncertainty	102
A.2.5 Calculation methods for uncertainty quantification	104
References	106
