

Contents

1	Introduction	1
1.1	General	1
1.2	Terms and definitions	2
1.3	Symbols and abbreviations	6
2	General framework of integrated life cycle assessment	7
2.1	Scope and basis of integrated life cycle assessment	7
2.2	Cornerstones of integrated life cycle assessment	8
2.2.1	Life Cycle Assessment - General basis	8
2.2.2	Environmental Product Declaration	9
2.2.3	Integrated design	11
2.2.4	Sustainability assessment	11
2.2.5	Existing tools for environmental and sustainability assessment	15
3	General methodology for integrated life cycle assessment of concrete structures	17
3.1	General	17
3.2	Complex approach to integrated life cycle assessment	17
3.2.1	Complex 3D model	17
3.2.2	Evaluation of total impact	17
3.3	Adaptation of ILCA to concrete structures	19
3.3.1	Life cycle of concrete structure	20
3.3.2	Level of detailing of LCA-model	21
3.3.3	Performance strategies	23
3.3.4	Regional specifics	24
3.4	Integrated life cycle optimization	24
3.4.1	DBSO – Deterministic based structural optimization	24
3.4.2	RBSO – Reliability Based Structural Optimization	25
3.4.3	Formulation of the optimization task	25
4	Identification of issues for ILCA of concrete structures	27
4.1	Specifics in life cycle phases of concrete structures	27
4.1.1	Specifics in production and construction phases	27
4.1.2	Specifics in use, maintenance and refurbishment phases	28
4.1.3	Specifics of demolition phases	28
4.1.4	Specifics of recycling phases	28
4.2	Identification of issues for different types of concrete structures	29
4.2.1	Building structures	29
4.2.2	Civil structures	30
5	Data	31
6	Conclusion	31
	Related ISO and CEN standards	32
