Acknowledgements	iii
Foreword	iv
1. Scope	1
2. Introduction	2
2.1 Energy consumption	3
2.2 The Green Package 2009 (EU)	5
2.3 The European Directive on Energy Efficiency in Buildings	6
2.4 Energy efficiency in buildings	8
2.5 The energy and emissions of greenhouse gases in the manufacture of building materials	10
2.6 The energy and GHG emissions from the use and operation of the building	10
2.7 The current situation of building energy efficiency in Europe	11
3. Current Guidelines and Standards	13
3.1 ISO information	13
3.2 CEN information	16
3.3 <i>fib</i> Model Code	26
3.4 U.S. information	31
3.5 Brazil	37
4. Life Cycle of Precast Structures	40
4.1 General Aspects of LCA	40
4.2 Buildings	42
4.3 Infrastructure	44

5.	Sustainability Aspects of Precast Structures	45
5.1	Introduction	45
5.2	Environmental Aspects	47
5.3	Social Aspects	59
5.4	Economic Aspects	59
6.	Methodologies for Precast Structures	62
6.1	Existing applications or tools	62
6.2	Common rules to retrieve the data	67
6.3	The sustainable structural design methodology (SSD)	69
6.4	Mives Method	76
6.5	Model for assessing sustainability of precast concrete products	84
7.	Case Studies	89
7.1	Buildings	89
7.2	Infrastructures	112
7.3	Special Works	117
8.	Conclusions and recommendations	122
	Annex 1. Environmental Product Declaration (EPD) examples	123
A.1	North America	123
A.2	Norway	128
A.3	United Kingdom	132
